

Delhi's power demand is more than the combined demand of Mumbai and Chennai

Delhi's peak power demand @7016 MW on July 10, 2018, was not the only record broken this year. This was the 11th time this year; Delhi's peak power demand surpassed last year's all-time high of 6526 MW, showing robustness of BSES' distribution network. Infact, Delhi's peak power demand is more than the power demand of Mumbai and Chennai put together and thrice than that of Kolkatta.

Stay Safe; avoid flying kites near electric installations

Kite flying is an integral part of the Independence Day celebrations in India.

Sometimes this otherwise innocuous activity can be hazardous, even fatal at times. The wide-spread use of metal coated manjha – being a good conductor of electricity – poses a great danger not only to the person flying the kite, but also poses a risk to the electricity supply of an area.

- Metal coated manjha can lead to trippings and even electrocution
- Tripping of just one 33/66 KV overhead line can disrupt power supply to over 10,000 residents of an area and tripping of a single 11 KV line to over 2500 residents

Follow simple tips to stay safe during the rainy season

Much to everyone's delight, Monsoons are here again! With them, Monsoon also brings with itself, its own set of unique problems and issues. Due to water-logging, chances of electricity related mishaps and incidents are especially high during the monsoon season. Simple precautions will help you stay safe and go a long way in ensuring incident free monsoons.

- Stay away from all electrical installations like electricity poles, sub-stations, transformers, streetlights etc
- Caution children not to play near them, even if they are barricaded.
- Do not touch electrical appliances with wet hands
- Keep a "Tester" at home. If a switch or a wall of your house is wet, do not touch it. First use the "tester" to check if there is an electricity leakage. If the need be, call your electrician.
